Kent Odell

APPEARANCES

(* Via WebEx)

Angie Gould, Renewable Energy Division, Technical Lead,
RPS Verification and Compliance, CEC
Gabe Herrera, CEC
David Mehl, California Air Resources Board
Craig Segall, California Air Resources Board
Don Ouchley, Deputy General Manager for Energy Resources,
Merced Irrigation District
Sharon Gonsalves, Office of Senator Anthony Cannella
Justin Wynne, Law Firm of Braun, Blaising, McLaughlin
and Smith
Mark Hendrickson, Director of Community and Economic
Development, County of Merced
Vinton Thengvall, CFO, Label Technology, Inc.
Luis De La Cruz, Owner/Publisher, *Between Friends/Entre
Amigos*
Irene De La Cruz, Owner/Publisher, *Between Friends/Entre
Amigos*
Steven Kelly, Independent Energy Producers Association
Anthony Andreoni, California Municipal Utilities
Association (CMUA)
Joh Pappas, Pacific Gas & Electric Company (PG&E)
Rachel Gold, Policy Director, Large Scale Solar Association
Susie Berlin, NCPA and MSR Public Power Agencies
Tim Tutt, Sacramento Municipal Utility District (SMUD)
Tanya De Rivi, Director of Government Affairs, Southern
California Public Power Authority (SCPPA)
Nancy Rader, California Wind Energy Association (CWEA)
Abraham Alemu, City of Vernon
David Kolk, City of Colton
William W. Westerfield III, SMUD
*Linda Johnson, Braun, Blaising, McLaughlin and Smith
*Laura Wisland, Union of Concerned Scientists (UCS)
*Steve Mills, Alliance for Desert Preservation

1 P R O C E E D I N G S

2 APRIL 9, 2015 9:32 a.m.

3 MS. GOULD: Okay, good morning everyone
4 and welcome to our workshop. I'm Angie Gould. I
5 am in the Renewable Energy Division here at the
6 California Energy Commission, and I'm the
7 Technical Lead for the RPS Verification and
8 Compliance.

9 I'm joined by, from the ARB, Dave Mehl
10 and Craig Segall, and also Gabe Herrera is to the
11 left from our Legal Office, and Emily Chisolm for
12 POU Compliance for the RPS.

13 We also have Kevin Chou running our WebEx
14 and Adam Van Winkle who will be collecting blue
15 cards for your comments. So if you have one,
16 make sure you raise your hand and we'll come get
17 that for you.

18 So today I'll be going over a few
19 background items, just housekeeping, purpose of
20 the workshop, the background for the RPS
21 Regulations, then I'll get into the Proposed
22 Modifications for the Regulations section by
23 section, followed by a brief presentation from
24 the ARB, just an oral presentation, and then next
25 steps.

1 So handouts were on the desk at the room
2 entrance next to the sign-in sheet and I hope
3 everyone in the room did sign in. We use that
4 for our rulemaking file.

5 The restrooms are located here on the
6 first floor, just that way. We have a snack bar
7 on the second floor across from the top of the
8 stairs. And there are several restaurants within
9 walking distance for lunch.

10 Emergency evacuation procedures, if there
11 is an alarm that goes off, anything like that,
12 just follow the Energy Commission staff out the
13 front doors and across to Roosevelt Park.

14 We are running this meeting through WebEx
15 and this meeting is being recorded via WebEx, as
16 well, and it will be available on the Energy
17 Commission's website afterward, and we're also
18 being transcribed by a Court Reporter. And this
19 presentation will also be available on the Energy
20 Commission's website.

21 For those of you in the room, fill out
22 your blue cards and hand it in to Adam and you'll
23 be called up to the podium. Those of you who are
24 commenting via WebEx, just use the raised hand
25 feature and we'll unmute you when it's your turn.

1 And when we get to the end of the WebEx comment
2 portion, we'll be opening up all of the phone
3 lines, and please only unmute your phone to ask a
4 question, so I would ask that all of you on the
5 phone, to keep things somewhat sane when we get
6 to that point, make sure you mute yourselves.

7 Written comments, please submit these
8 according to the directions in the NOPA that is
9 available on the Energy Commission's website.

10 The purpose of this workshop is to
11 discuss the rulemaking process and the proposed
12 modifications to the RPS Regulations for POU's, as
13 well as ARB's potential development of an RPS
14 Penalty Regulation.

15 We'd also like to encourage and
16 facilitate all public participation, again, thank
17 you for joining, and we're here to receive your
18 oral and written comments on the proposed
19 modifications, as well as the potential RPS
20 Penalty Regs.

21 So Senate Bill 591 became effective
22 January 2014 and SB 591 establishes a limited
23 procurement exemption for a POU that gets more
24 than 50 percent of its annual retail sales from
25 its own qualifying hydro generation.

1 If a POU meets those criteria, then it
2 may limit its RPS Procurement for a given
3 compliance period to the lessor of the retail
4 sales not met by its own hydro, the RPS
5 Procurement target that is applicable to all
6 POUs, or the amount of procurement that's capped
7 by the cost limitation.

8 The pre-rulemaking phase began with the
9 Order Instituting Rulemaking that was adopted in
10 March 2014, and then we held a Scoping Workshop
11 July 11th of 2014, and we received 15 sets of
12 written comments. And then much background work
13 after that.

14 We started the formal APA Rulemaking
15 phase March 27th with the publishing of the NOPA,
16 and OAL's Notice Register. We also posted
17 Rulemaking documents on the Energy Commission's
18 website, those were made available to the public
19 on that same date. That includes the Notice of
20 Proposed Action, or NOPA, the Proposed
21 Modifications that are also called "Express
22 Terms," the Initial Statement of Reasons, or
23 ISOR, and supporting materials for the economic
24 and fiscal impact statements.

25 The NOPA included a Notice of this Staff

1 Workshop, as well as the Adoption Hearing, it
2 included Public Comment Instructions, and gave
3 the availability of documents. And the ISOR
4 includes the rationale for all of the proposed
5 changes that we're making to the Regulations.

6 The supporting materials for the Economic
7 and Fiscal Impact Statement estimated a total
8 annual fiscal impact to the POUs of \$7,154.00.

9 So during this formal APA Rulemaking
10 Phase, all oral and written comments are recorded
11 and included in our rulemaking file. The Energy
12 Commission adoption hearing for the proposed
13 regulations is scheduled for June 10th at our
14 Regular Business Meeting, and once the rulemaking
15 is completed, the final rulemaking package will
16 be submitted to OAL for approval.

17 Copies of all the documents are available
18 on our website that you can see here, it's also
19 listed in the NOPA, and if you are having
20 difficulty accessing them through our website,
21 you can also contact CEC staff.

22 Okay, so we start with Section 3201,
23 which gives the Definitions. We've revised the
24 definition of "bundled" so that REC associated
25 with the onsite use of electricity could be

1 considered bundled only if the eligible resources
2 owned by the POU retiring the REC. If the
3 resource is owned by a third party, or by the
4 customer where the resource is located, that
5 would not be considered bundled.

6 We add a definition of resale, or resold,
7 so in this case it may be from any entity, not
8 just from another RPS obligated entity, and it's
9 the resale of contracts only, rather than
10 ownership agreements, as that would just be a
11 sale.

12 We've revised the definition of Western
13 Electricity Coordinating Council, or WECC, to
14 clarify the relationship to NERC, just for
15 accuracy. And we also renumbered various
16 subdivisions to accommodate the addition of
17 resale.

18 In Section 3202, we added subsection
19 A(3)(c), so this clarifies how electricity
20 products under a contract met the criteria of
21 Section 3202(A)(3), so that's the contract
22 executed before June 1st, 2010 that did not meet
23 the RPS rules that were in place at the time. It
24 clarifies how those electricity products will be
25 considered if that contract is subsequently

1 amended. And this is consistent with the
2 contract amendment rules outlined in Section
3 3202(A)(2)(b) for those count in full resources.

4 In Section 3203, we've revised Subsection
5 (A)(1)(d), so for RECs from a resource with a
6 data electronic transfer agreement that are to be
7 classified as PCC1, the associated electricity
8 must be scheduled into a California Balancing
9 Authority on an hourly or sub-hourly basis, it's
10 no longer enough to simply have a dynamic
11 transfer agreement in place. So this aligns the
12 electricity products procured under dynamic
13 transfer agreements with the other PCC1
14 electricity products.

15 In Section 3204, we've revised Subsection
16 (A)(7)(c), so this extended the averaging period
17 to qualify for the exemption under PUC Section
18 399.30J from seven to 20 years. So this is
19 consistent with the requirements for the
20 incremental hydro baseline and the RPS
21 Eligibility Guidebook, we felt that that was a
22 more appropriate comparison than to the seven-
23 year averaging period that was included for PURPA
24 in the statute.

25 We've also added Subsection (A)(10) to

1 Section 3204 to implement the requirements of SB
2 591, so this also includes a 20-year averaging
3 period to qualify for the exemption, and the
4 qualifying for and calculating the exemption is
5 based on the qualifying hydro production and not
6 what the POU procures.

7 The eligibility for the exemption is
8 determined on a compliance period basis and the
9 POU must comply on a compliance period basis
10 rather than annually. And the exemption does not
11 excuse the POU from the Portfolio Balance
12 requirements.

13 Section 3206, we've revised the
14 Subsection (A)(1)(a)(iii), so this is to clarify
15 the excess procurement calculation if contracts
16 are amended to add time.

17 We've also added Subsections (E) and (F)
18 to allow for partial waivers in addition to full
19 waivers of compliance related to the delay of
20 timely compliance, cost limitation, or portfolio
21 balance requirement reduction.

22 In Section 3207, we revised Subsection
23 (C), we moved the Attestation requirement for
24 accuracy so that it was reflecting the correct
25 items that were being attested to. And we also

1 added a requirement for POUs to report energy
2 consumption to support the retail sales
3 verification.

4 Additionally, we fixed a minor grammar
5 error in Subsection (F) and we also added
6 Subsections (G) and (H). Subsection (G) provides
7 a deadline for a POU to demonstrate that it meets
8 the criteria of PUC Section 399.3(O)(H),
9 previously there was no deadline included.

10 And Subsection (H) includes the reporting
11 requirements for a POU that meets the criteria of
12 SB 591 or PUC Section 399.3(O)(K).

13 In Section 1240, we've revised Section
14 (D) and this lists potential mitigating factors
15 that a POU may include in its Answer to a formal
16 complaint, and this list of mitigating factors is
17 not exhaustive, and it's based on the factors in
18 the Health and Safety Code Section 42403(B).

19 We've also revised Subsection (G) and
20 this states that any Notices of Violation that
21 are forwarded to the ARB may include suggested
22 RPS penalties comparable to those adopted by the
23 CPUC for retail sellers.

24 Okay, now I will hand over the mic to
25 Dave Mehl who will give you a brief presentation

1 from ARB.

2 MR. MEHL: Well, actually Craig is going
3 to help me out on this, we're going to tag team a
4 bit.

5 So SB 2, the enabling legislation of many
6 changes for the RPS of putting it up to 33
7 percent, provide one aspect that ARB is to do,
8 and that is that if the CEC has determined that
9 there is a violation after they have concluded
10 that action, they will forward that information
11 to the Air Resources Board who, using our
12 existing statutory authority, may impose
13 penalties comparable to those imposed by the CPUC
14 for noncompliance by retail sellers.

15 So we've given it a fair amount of
16 thought on what would be the best way to
17 implement that and we've decided that a
18 regulation would clarify the process of how we
19 would proceed on this. And we are at the early
20 phases of that, so we are very pleased that the
21 CEC asked us to participate in this, so we can
22 interact with regulated parties and other
23 stakeholders at an early phase of the process.
24 So since that's happened, some changes have been
25 introduced in the legislation that may remove us

1 from this role. So at this point, we wanted to
2 allow that process to move forward without us
3 interfering.

4 Our timeline is we're looking to go to
5 our Board if it's needed in the late fall. So
6 that way, whether or not the legislation passes
7 and we are removed, we'll see how that proceeds
8 through the Legislation. But we're still
9 developing a regulation, we want to talk to
10 people regarding what our thoughts are on if we
11 are to implement a regulation to enact this
12 provision, what would be the best way to do it.

13 So with that, Craig is going to address
14 what our thoughts are on this.

15 MR. SEGALL: Thanks, Dave, and thank you
16 all for being here.

17 So we are in a somewhat unusual situation
18 with the current statutory mandate, as you all
19 know, because we are not the agency administering
20 the regulation, nor are we in the position of
21 determining violation, our task is a more
22 administrative one, which is imposing this
23 penalty consistent with our ordinary enforcement
24 authorities and comparable to the PUC's penalty
25 structure.

1 So we have in some ways a departure from
2 our usual penalty process in which we would be in
3 the driver's seat gathering facts and information
4 and imposing a penalty based solely upon our
5 usual statutory structure. This suggests to us,
6 both based on the test of the statute, and on the
7 practical reality that is the CEC that will be
8 determining the nature of the violation, whether
9 there is a violation, and whether various waivers
10 and exemptions apply. But our primarily role
11 here is an administrative one.

12 So what we anticipate at this phase, and
13 this is one reason why we think the CEC's
14 proposed amendments are so helpful, is receiving
15 a fully developed file from the CEC identifying
16 the nature of the violation, if there is one, any
17 mitigating factors which we ought to consider
18 because evidence will be developed here with
19 expert agency that is in a position to judge the
20 nature of the violation. And if the CEC so deems
21 it appropriate, a recommended penalty which will
22 of course give due regard to, as we go through
23 our process.

24 We're expecting therefore to have a
25 fairly straightforward regulation, likely one

1 that's quite short, that essentially explains how
2 we will receive this fully developed file from
3 the CEC, explain that we will work through this
4 within our Enforcement Division, come up with a
5 penalty, and impose it through our usual process
6 while ensuring that that penalty is comparable,
7 although not necessarily identical, to the
8 penalty that would be imposed by the PUC.

9 So this is essentially where we are on
10 the core approach that we're intending to take.
11 Dave, have I omitted any points that you had
12 raised?

13 MR. MEHL: I think that covers it fairly
14 well.

15 MR. SEGALL: All right.

16 MR. MEHL: One thing I would like to say
17 is, being at an early stage, to reiterate
18 actually, is it gives us lots of opportunities to
19 interact and to work with stakeholders on any of
20 their concerns. So we're here today, we will
21 make ourselves available if you want to either
22 meet in person, or have a conference call to
23 further discuss issues, if you want to go more
24 formal feel free to send us a letter, but we are
25 able to work at a very informal level with you.

1 And at a future date we will, if
2 possible, depending on how things proceed, we
3 will have draft regulatory language that then we
4 will actually share and have a workshop to
5 discuss the specific language that we have
6 created. So there's lots of opportunities to
7 interact with us down the road on this. Back to
8 you.

9 MS. GOULD: Thank you. Okay, so the next
10 steps, the written comments are due for the RPS
11 Regulations on May 11th, so the instructions for
12 written comments are in the NOPA. June 10th,
13 again, is our proposed adoption date at an Energy
14 Commission Business Meeting, and that would have
15 an effective date of October 1st of this year.

16 And again, as Dave was saying, ARB
17 expects to take their potential Regulations to
18 their Board in the late fall.

19 The staff contacts are outlined in the
20 Notice for this Workshop, but they're also listed
21 here, you can contact me, and here's my number
22 and my email address, and at the ARB you can
23 contact Gary Collord and his number and email
24 address are listed.

25 Okay, so I think I might leave those up

1 on the screen for a minute. But with that, we
2 will start to take comments. So we're going to
3 start with the people in the room, if you have
4 blue cards, can you please raise your hand and
5 Adam will come around and collect those from you?

6 Okay, we'll start with Don - I forget how
7 to say the last name -- Ouchley, Merced
8 Irrigation District.

9 MR. OUCHLEY: Don Ouchley. Can I defer
10 to Sharon Gonsalves first?

11 MS. GOULD: Yes, of course.

12 MS. GONSALVES: Great. Thank you for
13 having me today. My name is Sharon Gonsalves,
14 I'm with Senator Anthony Cannella's Office, and
15 if it's okay, I have a letter here that he wrote
16 and I'll just read it for you guys and then we'll
17 submit a formal copy at a later time today.

18 "I am proud to be the author of Senate
19 Bill 591 that is being discussed today. This law
20 passed out of both houses of the State
21 Legislature without a single vote in opposition
22 before being signed by the Governor. I
23 appreciate the opportunity to provide input on
24 the implementation of this law.

25 The community of Merced and it's local

1 public utility, the Merced Irrigation District,
2 faces unique and special circumstances. This
3 public utility serves one of the most
4 impoverished communities not only in the state,
5 but in the entire country. MID has a combination
6 of physical and operational constraints on its
7 system that affect its ability to comply with
8 RPS.

9 The communities of Needles, San Francisco
10 and Donner all received recognition of their
11 unique and special circumstances at the time the
12 State developed its most current Code sections
13 pertaining to the RPS Program. Merced was
14 seeking the same considerations.

15 The interpretation being proposed today
16 does not meet the stated provisions contained in
17 Section 399.30, Section K. The Legislature
18 intended that this publicly-owned electric
19 utility that receives greater than 50 percent of
20 its annual retail sales from its own hydro-
21 electric generation shall not be required to
22 process excess additional renewable energy
23 resources. Senate Bill 591 was intended to
24 assist a single public utility in a small town,
25 not a large investor-owned utility seeking to

1 increase its profits.

2 These issues were vetted through both the
3 Assembly and the Senate in hearing after hearing.
4 The legislative intent was to help this
5 community.

6 I strongly request you consider the
7 intent of the Legislature as you work to
8 implement SB 591. This bill was intended to
9 provide real and consistent relief on an annual
10 basis when Merced Irrigation District meets the
11 required threshold. The Energy Commission should
12 follow through with this intent and I look
13 forward to continuing this dialogue as the
14 process progresses."

15 Thank you.

16 MS. GOULD: Thank you.

17 MR. OUCHLEY: Good morning. Thank you
18 very much for allowing us to speak this morning.
19 My name is Don Ouchley, I'm the Deputy General
20 Manager for Energy Resources at Merced Irrigation
21 District.

22 For those that don't know MID, it's
23 located in Eastern Merced County, it's a
24 relatively small region in the San Joaquin
25 Valley. Our district dates back to the early

1 1900's, providing water to approximately to 2,200
2 local farms, and most of the farms are 50 acres
3 or less and they're generational, people that
4 have been there a long time.

5 MID is a nonprofit community-owned
6 utility. In 1997, the District decided and began
7 to provide retail electric service to our area.
8 Since that time, we've connected about 6,500
9 residential customers and approximately 1,300
10 businesses. This represents, believe it or not,
11 .02 percent of the California Energy use. We're
12 very small.

13 Our public power is a very critical and
14 needed asset to our community. All the benefits
15 of our operation at Merced Irrigation District
16 revert back to the community. By almost any
17 metric that you choose, we are among the
18 disadvantaged communities in our state. More
19 than 25 percent of our residents live below the
20 Federal poverty level. In comparison, the
21 statewide poverty level is 15.9 percent.

22 Unemployment in Merced County is almost double
23 the statewide average, and Merced has one of the
24 highest unemployment rates of any county in the
25 state.

1 The public power we provide benefits both
2 families and businesses by helping to keep the
3 energy bills as affordable as possible. Our
4 rates help draw businesses to our area, which are
5 very needed, and to keep the ones that we've got
6 there.

7 When Senate Bill 591 was enacted and
8 signed into law, it was not done to provide a
9 total exemption from the RPS goal, it was in fact
10 enacted to allow us inclusion in the RPS goals.

11 In a region of some of the worst air
12 pollution in the nation, I can assure you that we
13 support the goals of RPS. Senate Bill 591
14 recognized that we face challenges both as a
15 disadvantaged community and as a utility with
16 some unique contractual and physical constraints
17 affecting our operations.

18 We're proud that we are a financial
19 supporter of the University of California's Solar
20 Research Institute, which is located at our
21 Castle Commerce and Aviation Center, and we're
22 also proud that we serve that facility with
23 electricity.

24 We want to also be part of the RPS
25 Program, but as I've stated, we have some unique

1 and special circumstances that require some
2 unique and special considerations by the CEC.
3 When it comes to RPS compliance, we feel that one
4 shoe doesn't fit all and that consideration of
5 the impacts of full compliance be taken into
6 account in how it affects our local communities.

7 One key flexibility that would greatly
8 assist MID And meet the clear goals of Senate
9 Bill 591 would be to interpret Senate Bill 591 as
10 a standalone provision that does not have the
11 bucket requirements; this would reduce the
12 overall cost of RPS compliance, while still
13 allowing MID to invest the large majority of its
14 RPS funds back into our community by funding or
15 incentivizing distributed generation projects.

16 We ask that you respect the wishes of the
17 Legislature and the Governor and you take any and
18 all steps to assist us in meeting the goals of
19 RPS, but we ask that you do it in a way that does
20 not further handicap an extremely disadvantaged
21 community. We ask that you do so in a way that
22 will prevent RPS funding from flowing outside of
23 our local economy, and we would ask that you do
24 it in a way that recognizes that the very real
25 physical and contractual constraints MID operates

1 in our environment.

2 Thank you for your time and your
3 consideration.

4 MS. GOULD: Thank you. Justin Wynne,
5 Merced.

6 MR. WYNNE: Thank you. My name is Justin
7 Wynne. I'm with the Law Firm of Braun, Blaising,
8 McLaughlin and Smith, and I'm here on behalf of
9 Merced today.

10 So I just wanted to build a little bit
11 off of what Don went over and then also we will
12 be following up with written comments that will
13 go into a lot more detail there.

14 First, I wanted to thank staff, I believe
15 the provisions relating to the applicability
16 section, particularly the 20-year averaging, I
17 think that's appropriate, that's sufficiently
18 long enough to address any extended drought
19 periods. And then also the methodology for how
20 Exchequer gets attributed to Merced. I think
21 that's appropriate and that clearly meets the
22 intent of the statute that this applies to
23 Merced.

24 As Don talked about, the actual way that
25 the structure that supplies to Merced, under

1 normal circumstances would not generally have any
2 impact, particularly since this is averaged over
3 a compliance period. So I think we know for
4 certain in the second compliance period, no
5 matter what happens next year, or the rest of
6 this year for hydro, there would be no impact to
7 Merced under the current proposal.

8 It's also extremely unlikely in the third
9 compliance period that there would be any benefit
10 either. We would have to string several very wet
11 years together, particularly with the outlook of
12 the current drought, it's unlikely that that
13 would happen.

14 I think the clear intent, as we discussed
15 today, of SB 591 was to provide consistent, year
16 to year relief to Merced. Unlike the provision
17 related to San Francisco, I think this focused on
18 the unique hydro circumstances, SB 591 spent a
19 lot of time during the analysis and during the
20 discussion focusing on the poverty circumstances
21 in the region that Merced serves.

22 I also think that it's helpful to look at
23 some consistent statutes, one that we're looking
24 at is a 2014 Bill, AB 2672, and that added Public
25 Utilities Code Section 783.5, that directs the

1 CPUC to consider alternatives that would increase
2 access for affordable energy in disadvantaged
3 communities within the San Joaquin Valley. That
4 includes Merced.

5 I think that we can think about these
6 bills as having similar purposes, the Legislature
7 is focusing on this region of the state that has
8 suffered from extended economic disadvantaged
9 circumstances, and it is focusing on lowering
10 energy rates and then also providing the
11 opportunities within the community for new energy
12 resources.

13 As you're going through and implementing
14 this, I think it's helpful to look at some of
15 these consistent statutes to get an idea of the
16 overall purpose that the Legislature had.

17 So one of the key things that we've
18 discussed today is that I think it's clear from
19 the legislative language, from the statutory
20 language, that SB 591 was intended to apply on an
21 annual basis. One subdivision (K), expressly
22 states that it applies to annual retail sales.
23 And then there is no reference to Subdivision (B)
24 that describes the compliance periods, and in
25 contrast if you look at the Subdivision (I that

1 deals with purpose, special, retail sales
2 calculation methodology, they include an express
3 reference back to subdivision B, so I think the
4 clear purpose was that that apply over a
5 compliance period basis. That's not found within
6 Subdivision (K), it's also not found within the
7 Subdivision that applies to San Francisco.

8 And sort of already mentioned, if you
9 apply this on a compliance period basis, I think
10 it's going to lead to results that are clearly in
11 conflict with the intent of the statute. So, for
12 example, if in 2016 Exchequer produced more
13 generation than the entire load of Merced,
14 completely over their load, there would still be
15 no impact to Merced. And so I think particularly
16 when you look at the express language "annual
17 retail sales," that's outside the intent of what
18 the Legislature was looking for.

19 And then I know in the ISOR there was a
20 discussion about the administrative difficulty of
21 applying this on an annual basis. One, I'm not
22 sure that should be a driving basis for how the
23 statute is interpreted, but I think the way that
24 you've implemented this with a 20-year averaging
25 methodology would make it extremely unlikely that

1 that would happen just based on -- I ran some
2 rough numbers. I think even if we had
3 extraordinary drought conditions for the next
4 five years in a row, because of the 20-year
5 averaging, SB 591 would still apply to Merced,
6 and so I think it's not going to be the case
7 where on a regular basis they're popping in and
8 out of applicability of this.

9 Because it creates an annual obligation,
10 I think it's reasonable to interpret this,
11 similarly to the San Francisco provision, as a
12 standalone provision that doesn't include any
13 reference to section 399.16. The ISOR mentioned
14 that there was the provision that says that their
15 obligation, shouldn't it be above what would
16 otherwise be required? And I think there's some
17 analysis in the legislative history looking at,
18 like you could have a situation where Exchequer
19 produced 20 percent of their load, and they
20 shouldn't have an 80 percent RPS in that year.
21 So I think it's just controlling for that very
22 unlikely circumstance that would be outside the
23 clear intent, but that's not itself an express
24 reference to 399.16.

25 Similar to the situation that San

1 Francisco finds itself in, because of the
2 unpredictable nature of hydro, one year could be
3 full load, the next year could be very little.
4 It makes it very difficult to do procurement for
5 Bucket 1. Typically if you're going to get
6 better prices on Bucket 1, you would want to look
7 at like a 20 or 25-year contract, and even the
8 way you've interpreted the excess procurement
9 rules, you're severely punished if you're doing
10 short term contracts.

11 And then also, because of the unbundled
12 versus bundled requirement, if you had already
13 procured generation, and then you suddenly found
14 out you didn't need it, you'd be extremely
15 restricted in your ability to sell that off.

16 So similar to San Francisco, they would
17 have a lot of difficulty because of the variation
18 in hydro doing long term planning. Unlike with
19 Bucket 3 and also focusing on distributed
20 generation, those problems don't come up because
21 you can generally do short term contracts for
22 that, and if it's structured for DG with their
23 customers, that would be supporting other
24 purposes, as well.

25 The ISOR also mentions that the San

1 Francisco subdivision expressly states that it
2 uses the phrase "to procure eligible renewable
3 energy resources, including renewable energy
4 credits." And there was a focus on the fact that
5 there was reference to renewable energy credits
6 in that subdivision and not Subdivision (K). The
7 thing I would point out is that phrase is
8 actually pulled exactly from Subdivision (A), so
9 399.30(A), uses the exact same phrasing of
10 "eligible products from eligible renewable energy
11 resources, including renewable energy credits."
12 So I think that's just the general phrasing to
13 describe renewable procurement and not signaling
14 something unique within that phrase that, by not
15 including it within Subdivision (K) has a
16 significant difference.

17 So the last thing I would mention, just
18 building off of one of Don's final points, is
19 that I think interpreting this bill without the
20 portfolio balance requirements is fully
21 consistent with the intent of the bill because,
22 as Don was describing, they have certain
23 Balancing Authority restrictions that would
24 prevent them from building utility-scale
25 generation within their geographic region and

1 because of the general treatment of distributed
2 generation as bucket three, they wouldn't be able
3 to focus their RPS procurement funds within their
4 community, that wouldn't be an option for them.
5 Without the portfolio balance requirements, they
6 would be able to, and I think they would commit
7 to, the vast bulk of their RPS funds would then
8 be turned around and focused on distributed
9 generation, giving direction that is a primary
10 means of compliance, and that meets the goal of
11 reducing particularly the customers that would be
12 taken advantage of that would have reduced bills,
13 and then it would be creating jobs and economic
14 benefits within their community. And I think
15 that's fully consistent with what the intent was.

16 So again, we'll provide more detailed
17 comments and then we're obviously available if
18 you have any questions. Thank you.

19 MS. GOULD: Thank you. Okay, Mark
20 Hendrickson, Merced County.

21 MR. HENDRICKSON: Good morning. My name
22 again is Mark Hendrickson. I'm the County's
23 Director of Community and Economic Development,
24 which is to say I'm responsible for the County's
25 economic development and business development and

1 land use decision making for the entire County of
2 Merced.

3 Thank you very much for this opportunity
4 this morning. You know, it's been mentioned on a
5 couple occasions already, you know, Merced County
6 has historically faced some very significant
7 socioeconomic challenges. Historically, we've
8 been very driven, our economy has been very
9 driven by agriculture, but if the truth be told,
10 our economy and our community is, in fact,
11 changing.

12 While we still have chronically high
13 unemployment, we are seeing some success. I will
14 highlight a couple things just for you this
15 morning. Castle Commerce Center, which is a
16 former military installation that closed in 1995,
17 just as an example, we today have about 95
18 leases, a couple thousand employees, and we're
19 seeing some fairly significant growth in
20 development.

21 I want to highlight just two or three of
22 those businesses that have come to Castle just in
23 the last few years, which include Google, which
24 now operates multiple projects at our site. We
25 have an existing tenant at Castle who, in

1 partnership with Boeing is going to be launching
2 a simulator facility here, a multi-unit simulator
3 facility here in the next few months, and then
4 most recently in the last couple of years we were
5 able to bring in overhead crane manufacturer to
6 the area which, upon coming to Merced County,
7 initially promised about 25 new jobs to the
8 community, but after Year 1, had about three
9 times that number. I highlight those three
10 examples because if it were not for our
11 partnership with Merced Irrigation District,
12 those opportunities would not be coming to Merced
13 County.

14 In an era, I believe, when we have fewer
15 and fewer economic development incentives, and I
16 think we're all very well aware of the demise of
17 redevelopment agencies and enterprise zones, one
18 of our last economic development incentives, I
19 believe in our area, is through our partnership
20 with Merced Irrigation District. They, by virtue
21 of their ability to provide lower cost power
22 than, for example, their investor-owned utility
23 counterparts in the region, we are able to use
24 that as both an expansion, as well as an economic
25 development retention tool.

1 Just simply stated, going back to the
2 earlier point, we are very hopeful that as you
3 move forward, that you will do anything you can
4 to assist our community by providing as much
5 flexibility as possible to Merced Irrigation
6 District as a part of their effort to maintain
7 affordably priced power. Again, for us and in a
8 community where we do have some fairly
9 significant challenges, we need all the help that
10 we can get and I think that, again, were it not
11 for Merced Irrigation District and our
12 partnership with them, we would be in much worse
13 shape than we are today.

14 So with that being said, again, thank you
15 for your time and, again, I'd appreciate anything
16 you can do to help Merced Irrigation District
17 respectively, thank you.

18 MS. GOULD: Thank you. Vinton Thengvall,
19 Label Technology, Incorporated.

20 MR. THENGVALL: Hello, good morning.
21 Thank you for letting me present this morning.
22 My name is Vinton Thengvall, and I'm the CFO at
23 Label Technology, Inc. We're a mid-sized
24 business in the community of Merced and among
25 those who benefit from MID's electricity. We are

1 a label and packaging manufacturer. We use
2 plenty of MID power to run our printers and
3 laminate equipment.

4 Our business began with three people
5 working out of a garage in 1986. We have grown
6 to a \$35 million corporation with more than 120
7 employees. We became 100 percent employee owned
8 in 2007.

9 In a community like Merced where every
10 job counts, we represent an enormous success
11 story; we don't take that for granted, as a
12 result of the dedicated employees, loyal
13 customers, and vendors that provide reliable
14 services that has allowed us to grow.

15 The affordable electricity provided by
16 MID is a large part of that story. Over the four
17 plus years that we have been served by MID, we
18 have had nothing but exemplary service. We know
19 that when we have a question or are in need of
20 any kind of assistance, we're literally calling a
21 neighbor down the street. We know that they have
22 an understanding of our needs and are there to do
23 whatever it takes to make sure we are successful.

24 I respectfully would like to request that
25 you take any steps possible to help our local

1 utility with this matter. Again, their
2 affordable rates have been an instrumental part
3 of our success. Thank you very much.

4 MS. GOULD: Thank you. Luis De La Cruz,
5 Between Friends.

6 MR. DE LA CRUZ: I would like to yield to
7 my wife, Irene De La Cruz.

8 MS. GOULD: Okay, thank you. Irene.

9 MS. DE LA CRUZ: Thank you, babe. Hi, my
10 name is Irene De La Cruz. I'm the owner and
11 publisher of a publication called *Between*
12 *Friends, Entre Amigos*. We have a little bit over
13 21,000 readers in Merced County, it's in English
14 and Spanish, and we focus on Latinos and
15 Hispanics in a very positive note. So thank you
16 once again for allowing me to speak today.

17 My husband and I, you know, grew up
18 working in the fields in Merced County. We know
19 what poverty is, we lived it, and so that is one
20 of the reasons why I'm here today. What we do is
21 we now work to provide a voice for those that
22 otherwise wouldn't have one. We deal with a lot
23 of people in Merced County because of our
24 publication, and in the community work that we
25 do, we see a lot of people that are, of course,

1 in need. You can see the lines of people
2 standing for what's called the brown bag, which
3 is food that's given out to seniors and then the
4 USDA also that gives out bags of food, and it's
5 very heart wrenching to see them line up. They
6 come at like 4:00 in the morning, you know, line
7 up at the community hall just to make sure that
8 they get a bag of food. So it's very, like I
9 say, heart wrenching to see the line get longer
10 and longer.

11 Now today you've heard a lot of numbers
12 about Merced being a disadvantaged community, you
13 know, 25 percent of our community lives below the
14 Federal Poverty level, we have 16 percent
15 unemployment and a median household income of
16 nearly half of that of the state average.

17 But I want to share with you that there
18 are human beings behind all these numbers. Like
19 I mentioned before about these people standing in
20 line for food, we have people that come to us to
21 ask us about, you know, "Do you know where I can
22 get a job? Do you know how I can get some food?"
23 That kind of thing. Five to 10 dollars paying
24 for, you know, an increase in your utility bill,
25 it makes a lot of difference for people. Beans

1 and rice can only go so far, for \$10.00, you can
2 get spaghetti and something that will feed your
3 family, so it's very crucial, it has a great
4 great impact on the people in our community that
5 is so disadvantaged.

6 So I don't claim to understand the policy
7 issues behind, you know, being discussed here
8 today. But I do understand poverty and I
9 understand the value of a dollar. The goals of
10 the RPS Program, as I understand them, are
11 commendable, but from what I've seen, the RPS
12 Program results in our impoverished community
13 subsidizing renewable energy projects and jobs in
14 other communities, and that's simply not right.

15 I understand everyone in this room has
16 difficult decisions to make, I also understand
17 they are often times not easy answers. However,
18 as you discuss these important issues, I want to
19 ensure you understand that real people living in
20 real poverty are affected by the outcomes of your
21 discussions. I know it's a tough position to be
22 in; the people before you today from MID are not
23 here out of greed, they represent a local public
24 agency. I know wholeheartedly, and I believe
25 they are here for the same reason, that they come

1 to the poorest parts of our community to hand out
2 balloons and coloring books to children who have,
3 you know, little else. They are here because
4 they care about the wellbeing of our entire
5 community, from those who are employed to those
6 who are hoping to become employed.

7 I would like to respectfully request that
8 you don't simply take my comments and others into
9 consideration. With greatest respect, I am
10 asking that you go beyond that and provide our
11 community with the help it desperately needs. We
12 need every dollar we can keep in our community,
13 and we need every job that can be created or
14 sustained in our community.

15 And I just want to let you know one last
16 thing, is that I think the bottom line, all we
17 are asking for, is fairness. So thank you once
18 again for allowing me to speak today.

19 MS. GOULD: Thank you, Irene. Luis,
20 would you like to speak, as well? Okay, thank
21 you. Steven Kelly.

22 MR. KELLY: Good morning. My name is
23 Steven Kelly and I am with the Independent Energy
24 Producers Association.

25 And I wanted to speak on a slightly

1 different issue which is kind of the necessity of
2 making sure that your regulations that you
3 finally promulgate are clear and concise, and I'm
4 happy to hear that you're going to be spending
5 some time on these Regs because the language that
6 I've seen and read today, I think is not meeting
7 the standard that we want. And let me tell you
8 what I'm talking about particularly, is the
9 section in the Express Terms that deals with, for
10 example, bundled product and why it matters.

11 Why it matters is because the language
12 that you promulgate here is going to impact what
13 the Public Utilities Commission does, and it
14 actually has spillover effect in how WREGIS
15 tracks things. We need to be very clear.
16 Recently I've had an opportunity to read comments
17 from the PUC in a proceeding in which I was not
18 engaged, which was the Net Energy Metering
19 proceeding, and I was struck by the fact that the
20 language people are using is awfully loose and
21 messy; for example, DG, I've heard it described
22 today, DG as I understand it is defined as
23 anything that is less than 20 megawatts,
24 interconnected at the distribution and
25 transmission system or behind the meter. It's

1 not simply behind the meter. We have to get the
2 language more precise so that we know what we're
3 talking about. And when it comes to regulations,
4 that's absolutely critical.

5 And I want to talk to you about the
6 paradigm that I understand is in place today and
7 contrast it with the language that you've used in
8 your bundling description under the Express
9 Terms, to describe what I think is a disconnect.

10 As I understand where we are today, we
11 have essentially renewable energy is of two
12 types, it's either load modifying, i.e. behind
13 the meter, or it's supply resources. As a supply
14 resource, you're either going to be a retail
15 product, or you're going to be a wholesale
16 product, there's no any other alternative to
17 that. And this is why metering is so important,
18 because metering is necessary to make sure that
19 whether it's retail or wholesale, it's accurately
20 metered, you can avoid abuse, and double-
21 counting, in terms of meeting compliance with
22 RPS. So metering is critical for those types of
23 resources.

24 Ownership is essentially defined by rule
25 now, behind the meter is a resource that is owned

1 by the, as I understand it, the homeowner, for
2 example, if it's rooftop PV, but that's a load
3 modifying resource. Sales Agreements define the
4 relationship for the remainder, for retail and/or
5 wholesale. And this is important because then it
6 affects how you define things in terms of the
7 bundling concept, or the buckets. Who owns it?
8 At what point do they have ownership? And when
9 does the environmental attribute separate from
10 the ownership? For behind the meter resources,
11 how is it retired?

12 I think there's a fundamental lack of
13 appreciation for the need for clarity across all
14 the Regulatory Agencies, and among stakeholders
15 on the paradigm in which we're operating, such
16 that we end up with regulatory language that is
17 squishy and mushy and is not consistent across
18 the agencies. And I think that is a huge problem
19 that we need to fix now. So I appreciate the
20 fact that you folks are going to spend some time
21 on this. I read the bundle description in the
22 Express Terms and I did have some concerns, I
23 think it fosters double-counting, for example,
24 which is something I'm very concerned about, and
25 so forth, and it's not clear who is going to own

1 stuff. So we need to work on that.

2 And the reason this matters is clarity
3 and is because the entire RPS Program, from the
4 get go, has been built upon policy makers, but
5 more importantly public confidence that what
6 they're getting, or what they're paying for is
7 what they're getting, i.e., an eligible renewable
8 resource. That's why metering is so essential in
9 this whole program, to keep the public confidence
10 there that they're getting what they pay for.

11 And if we undermine that integrity at the
12 metering and undermine the integrity of the claim
13 for an RPS resource, we risk undermining the
14 entire program and the public's confidence in
15 this. So that's why it's important and I'm
16 pleased to hear that you're going to spend some
17 time on this, I'd like to work with you on this,
18 we can provide language, but if you're going to
19 have a workshop or another process, I'll wait
20 until then. But I think we all -- and we need to
21 draw the PUC into this, as well.

22 MR. HERRERA: Quick comment: you know,
23 these rules would apply to POUs, not to retail
24 sellers, so obviously the CPUC has their own
25 rules, we work with them behind the scenes to

1 make sure that our rules are consistent with
2 them, it makes sense that there be consistent
3 rules across the board. I wanted to leave you
4 with that thought, to say that what we're doing
5 here will affect POU's because these are POU-
6 related rules, and the CPUC may disagree with
7 aspects of these Regulations.

8 MR. KELLY: Yeah, I get that, but I think
9 there's a paradigm here that we all need to agree
10 to generally because from the developer
11 perspective who is trying to sell this stuff to
12 load serving entities, it really doesn't matter
13 and, as you develop these things, you need to
14 know. And there ought to be consistency to the
15 extent that we can achieve it between the POU's
16 and the IOUs on basic concepts, set aside
17 treatment on the hydro issue, or whatever else,
18 just basic stuff. So, thank you.

19 MS. GOULD: Anthony Andreoni, CMUA.

20 MR. ANDREONI: Thank you. I'm Anthony
21 Andreoni from the California Municipal Utilities
22 Association. First off, I want to thank the CEC
23 and ARB jointly hosting this workshop, I think
24 this is a move in the right direction that you
25 all are working and coordination as you go

1 through these amendments. I just have a few
2 overview points I want to make and we will
3 certainly follow-up with written comments to the
4 CEC.

5 First off, this is the first issue I'll
6 talk briefly about, is an issue that we have
7 brought up in the past. It's dealing with how
8 Product Content Category or PCC1 for DG is dealt
9 with. You've already started to hear a little
10 bit about this. Our concern with the proposed
11 definition on bundled is that it's too narrow.
12 It still lacks authority and consistency and
13 clarity as required by the Administrative
14 Procedures Act, or within State Policy and the
15 direction of the electric industry.

16 By treating behind the meter as -- behind
17 the meter I'll just refer to as DG, in this case
18 as PCC3 -- the Energy Commission is limiting the
19 ability for DG to be no more than 10 percent of a
20 POU's grandfathered RPS procurement. And that's
21 important. For many POUs, this would mean that
22 DG would account for a small fraction of the
23 total RPS procurement.

24 It's really, to look at it even broader,
25 it's inconsistent with the Governor's 50 percent

1 renewable goal, which calls for more distributed
2 power and expanded rooftop solar. I mean, that's
3 something that we are working on and looking
4 towards trying to figure out how everybody is
5 going to be able to meet that.

6 It's also, from what I can tell looking
7 at the ARB Scoping Plan, a little bit
8 inconsistent because that also encourages onsite
9 DG. And obviously the Governor's policy is
10 really supporting a lot more DG on the grid.

11 There really needs to be consistency,
12 again, I'm happy to see that both the ARB and CEC
13 is here, between both Regulatory Agencies on
14 those policies.

15 Also, as you look at PCC3, the Bucket 3
16 RECs, they're not worth as much as what they are
17 as a PCC1. This means that the customers that
18 own DG facilities are being compensated at a
19 level far less than generated, generation that is
20 located far from the load, or even out of state,
21 so this seems to be a little inconsistent, again,
22 within RPS.

23 We recognize that this is a very complex
24 issue that will require substantial
25 consideration. However, the CEC should not

1 further restrict the ability of POU's to structure
2 transactions with their customer to provide PCC1
3 from DG facilities.

4 Moving to my next issue, we do support
5 what Merced has already mentioned. The
6 implementation of SB 591, as you heard also from
7 Senator Cannella's Office, Merced serves one of
8 the most economically disadvantaged regions in
9 the State. I briefly went over your economic
10 valuation, you do provide some cost evaluation in
11 your presentation, you provide some cost number
12 basis for meeting some of the changes in the
13 rule, but I don't really think, just in the first
14 review that I've seen, that you really encompass
15 the economic impacts from local governments that
16 are going to be impacted from the changes that
17 you're providing and suggesting. The economic
18 impact really needs to be looked at a little
19 closer. Some of the values and some of the
20 assumptions you make don't always necessarily
21 align with what our members are going to have to
22 do to meet the requirements, and so I think that
23 does need to be looked a little closer.

24 I recognize there are provisions in the
25 rule for alternative compliance, but in reality

1 we're really trying to make sure that this can be
2 implemented and it doesn't disadvantage the
3 community of what's going on currently. The
4 clear purpose of SB 591 was to provide MID's
5 customers with relief from the costs of RPS, and
6 the way it's written it would only provide relief
7 during very wet hydro years.

8 So we just recommend that you should
9 interpret SB 591 to provide MID with sufficient
10 flexibility, such that it can invest in its RPS
11 funds into the community.

12 The next item I'll focus on is just
13 excess procurement. This has been one that we've
14 talked a little bit in the past. The existing
15 excess procurement rules are fairly restrictive,
16 they virtually limit, no POU can use them for any
17 non-grandfathered procurement; instead, the POUs
18 must rely on the 36-month window for retiring
19 RECs, the option is administratively more
20 complicated, and puts the procurement at risk if
21 an inadvertent error results in the 36-month
22 window being exceeded. There's really no clear
23 rationale for severely restricting access
24 procurement and it serves to add unnecessary
25 administrative cost to the POUs and, again, that

1 adversely or unnecessary administrative cost
2 should probably also be looked at a little closer
3 within the economics framework that you're
4 looking. We will continue to provide more
5 detail, as I mentioned earlier in our written
6 comments, we do request that CEC considers
7 modifications such as this one where the
8 technical reading of the statute adds
9 administrative costs and burden. And the CEC
10 must ask whether the benefit or policy purposes
11 are served to justify those additional costs.

12 The last issue I'll just highlight on
13 because I know ARB spoke a little bit about
14 enforcement, we do expect since the beginning of
15 this rule that should there be any consideration
16 of a fine or an issue after looking at
17 verification, that the CEC has to consider moving
18 it over to the Air Board, that we have the
19 ability to work closely with the Air Board at
20 that point and recognize that currently, legally,
21 the ARB, the way this is set up, has to meet that
22 obligation, those statutory obligations
23 consistent with the authority set out in law. So
24 until there is any changes, certainly under
25 current legislation or proposed legislation, we

1 really do want to work closely with the ARB to
2 make sure that you're not only tuned in early,
3 but we have the opportunity to continue to talk
4 about those issues. So we will -- we do have a
5 few other areas I'm not going to cover right now
6 that we will add to our written comments to you.
7 But, again, thank you for your time and we look
8 forward to working more with you on this effort.

9 MS. GOULD: Thank you. John Pappas,
10 PG&E.

11 MR. PAPPAS: Thank you for the
12 opportunity to speak before you and thank you to
13 both the CEC and the ARB for holding this
14 workshop. I'm John Pappas from PG&E and I work
15 on Renewable Energy matters. And first of all, I
16 wanted to commend you on the work you've done so
17 far on the changes to the Regulations and
18 appreciate your consideration of our July 28th
19 comments, July 28, 2014.

20 PG&E intends to file additional comments
21 on the proposed changes and I just wanted to file
22 a few areas that we have some concerns with here.
23 One area is an area that Steven spoke about and
24 that is the definition of bundle. We believe
25 that the CEC should not classify POU-owned behind

1 the meter generation as bundled, that that would
2 create disparate treatment between the RPS
3 responsible entities among the state, disparate
4 treatment between the ones obligated to the CEC
5 requirements, and those obligated to the CPUC,
6 and that they should instead get classified as
7 Category 3.

8 The second area is the definition of
9 dynamic transfer and the requirement that an
10 hourly schedule be included in that. We do not
11 see any such requirement actually in the
12 legislation. There seems to be a distinction
13 between hourly deliveries and those that are
14 subject to dynamic transfer and that simply
15 having a dynamic transfer agreement should be
16 sufficient.

17 And then the last area that we'll comment
18 on is in terms of the implementation of 591. We
19 believe that Regulations must be consistent with
20 the law and specifically that MID must receive
21 the generation from its facility in order to
22 qualify for the counting exemption, and also must
23 demonstrate each and every year that has served
24 50 percent or more of its sales with large hydro
25 in order to qualify.

1 So I appreciate the opportunity to
2 comment and, again, we'll be filing written
3 comments.

4 MR. HERRERA: John, could I ask you a
5 quick question concerning behind the meter DG.
6 So you indicated that the rules need to be
7 consistent, Energy Commission's rules, CPUC's
8 rules, and I know we've talked to a number of
9 POUs that own behind-the-meter DG, so to speak,
10 and they use it perhaps for their own purposes.
11 Is PG&E in a similar situation? Do you own a lot
12 of DG like that?

13 MR. PAPPAS: No, we do not.

14 MR. HERRERA: Okay. Thanks.

15 MR. PAPPAS: Thank you.

16 MS. GOULD: Thank you. Rachel Gold, LSA.

17 MS. GOLD: Hi. Good morning. Rachel
18 Gold. I'm the policy director for the Large
19 Scale Solar Association. And I very much
20 appreciate the opportunity to comment this
21 morning. I just wanted to speak on a couple of
22 issues, one that Steven already mentioned. I
23 wanted to also weigh in and express our concern
24 with the changes to the definition of the bundled
25 product. Our concerns are principally that this

1 change doesn't appear to address or account for
2 the disconnect between counting behind the meter
3 generation differently for the POU's in this case
4 than for the retail sellers or other onsite load
5 that may be used in a similar manner with other
6 transactions. And while we recognize that the
7 CEC is putting forth regulations for the POU's,
8 those changes have real impacts in the market in
9 terms of the kind of signals that developers are
10 getting, the kinds of transactions that are being
11 developed, and certainty for both existing
12 contracts and how the market is going to move
13 forward.

14 So those are some of the reasons we think
15 it's really important to clarify that language
16 and to have a very thorough discussion of why and
17 how this change retains integrity of the current
18 system and ensures there aren't double-counting
19 of those RECs. And this is principally because,
20 for most of those situations, that behind-the-
21 meter generation would already reduce the retail
22 sales numbers, it's the basis of the requirement
23 for the RPS obligation. So I think that really
24 needs to be addressed and we look forward to
25 working with you on making adjustments to that

1 definition.

2 So the other piece that I wanted to
3 mention, and we submitted some comments, initial
4 comments yesterday just to highlight this for all
5 of you, is that we were concerned when we saw the
6 change of the averaging of the hydro generation,
7 and we certainly understand that the change due
8 to the extreme drought is resulting in many
9 changes potentially for POU's that might have
10 otherwise met an exemption, but on the face of
11 this, it appears that we're changing a regulation
12 midstream in the middle of the compliance period
13 to ensure the same result, and that is
14 problematic. And so I'd love to hear more and
15 discuss with all of you some more of the
16 rationale behind that change and why it makes
17 sense in this case. I think we really want to
18 see the RPS be both productive and effective, and
19 that we are making real progress towards our
20 collective goals.

21 MS. GOULD: And I can touch on that
22 briefly. We were looking at changing the
23 averaging period and this is for San Francisco
24 from seven years to 20 years. The seven years
25 was based on an averaging period for retail sales

1 for I think it was PWRPA and Eastside, and kind
2 of use that as something to hang our hat on, a
3 number to hang our hat on, for averaging for San
4 Francisco's hydro sales just to qualify for the
5 exemption. It made sense to have some sort of
6 averaging because of the sort of fickle nature of
7 hydro. But the 20 years, we subsequently
8 realized was the basis of the incremental hydro
9 baseline and the RPS Eligibility Guidebook, and
10 we felt that that was a more appropriate number
11 to base our averaging period on than the seven-
12 year retail sales averaging for PWRPA. So I
13 think that was the genesis of it. It was to find
14 a way to average it and a way that was consistent
15 with current practice, and kind of accounted for
16 the up and down nature of hydro generation.

17 MR. HERRERA: Yeah, I can add some more
18 to that. You know, additionally in the case of
19 San Francisco we did obtain information from San
20 Francisco on their Hetch Hetchy productions and
21 found that that number in the statute, the 67
22 percent, was consistently met and so changing it
23 from seven years to 20 years in the case of San
24 Francisco, in our view, didn't look like it made
25 a big difference. But having a requirement for

1 one POU that measured compliance with a condition
2 in the statute based on 20 years versus seven
3 years did not make sense.

4 And we also, when we looked at the
5 situation for Merced Irrigation District,
6 recognized that there was the intent in the
7 statute to provide some relief to Merced, so we
8 didn't want to select an averaging period for
9 them that resulted in no benefit at all. So for
10 consistency purposes, and based on our reading of
11 the statute, SB 591, we thought 20 years was the
12 appropriate averaging period. I mean, if you
13 think that a lower averaging period makes more
14 sense given the language in the statute, I would
15 encourage you to provide comments to that effect.

16 MS. GOLD: Okay, thank you. And I
17 appreciate the explanation. Thanks, that's all I
18 have this morning.

19 MS. GOULD: Thank you. Susie Berlin,
20 NCPA and MSR.

21 MS. BERLIN: Good morning. Susie Berlin
22 for NCPA and MSR Public Power Agencies. I have a
23 couple of questions and so rather than comments,
24 so it's a workshop, I was hoping you guys can
25 enlighten me here.

1 With regard to the revision in
2 3206(A)(1)(a)(iii), there's a limit on the
3 applicability of an extended contract. If you
4 have a contract for more than 10 years and you
5 extend it, and for less than 10 years, you're not
6 allowed to count for excess procurement what is
7 for less the extension period. And I was
8 wondering if you could tell me what the objective
9 is there if we already have a contract for more
10 than 10 years and it already meets the goal of
11 encouraging long term procurement, so extending
12 that same contract for a time, maybe even as a
13 stopgap measure to continue development of larger
14 long term projects? It doesn't seem that it's
15 consistent with the statute to penalize an entity
16 that had already entered into a long term
17 agreement in the first place.

18 MS. GOULD: So when we were looking at
19 the intent of the statute, we felt that it was to
20 encourage, you know, going forward, long term
21 procurement, and when we thought about having a
22 10-year or greater contract in place and then
23 potentially adding little increments, maybe a
24 year at a time, or something like that, we didn't
25 feel that was consistent with the intent of the

1 statute.

2 MS. BERLIN: Okay, thank you.

3 MR. HERRERA: Can I just ask a question
4 back to you, Susie? So in that case if you have
5 a long term contract greater than 10 years, and
6 now you're looking at amending it, I mean, would
7 one of the options available to the POU be
8 extending it for a longer period, for another 10-
9 year period? Or --

10 MS. BERLIN: It could be, or it could be
11 that you're developing another long term resource
12 that didn't come on line as fast as you wanted,
13 so you just need to use this existing resource
14 for a few more years or something less than 10,
15 so that as a stopgap measure, for example. So
16 there are myriad scenarios that can come into
17 play that would justify and warrant a shorter
18 extension.

19 With regard to 3206(E), the new
20 provisions on applying optional compliance
21 measures, can you give me an example of how you
22 think, just an example of how 3206(E), what that
23 would look like.

24 MS. GOULD: I forgot which one that is
25 off the top of my head.

1 MS. BERLIN: I'm sorry, that's applying
2 the optional compliance measures for delay of
3 timely compliance, or a cost limitation for a
4 proportion.

5 MS. GOULD: Right, right. So the
6 existing language only sort of envisions or has
7 language for a full waiver of compliance. And we
8 wanted to make clear in the Regulations that a
9 POU could, if it only has rationale for a portion
10 of its shortfall, it would be able to submit a
11 request for waiving a portion of that rather than
12 the entirety. So this is to allow for a POU to
13 request some portion and, if it doesn't meet the
14 entirety of the shortfall with a delay of a
15 timely compliance condition or a cost limitation,
16 that it would be allowed to ask for some lesser
17 amount to be waived.

18 MS. BERLIN: Okay, thank you.
19 3207(C)(1)(i) is the new requirement -- sorry,
20 too many post-its -- for the POU to report the
21 energy consumption. What do you envision that
22 reporting looking like beyond the new form? Or
23 can you explain a little bit more about what the
24 reporting would look like?

25 MS. GOULD: So I think we asked for a

1 description of it, so I think it would have to be
2 -- we might add a field to the reporting forms
3 that include a place to put an energy consumption
4 number; it also might just be a narrative backed
5 up by any documentation you may have on the POU's
6 on energy consumption. So we wanted to have that
7 information to support our verification of retail
8 sales numbers because we were looking at
9 different retail sales that POU's were reporting,
10 they didn't always match what was reported to
11 EIA, oftentimes that was because of the POU's own
12 energy consumption, and we wanted to be able to
13 have those numbers so that we could do our
14 verification comparisons.

15 MS. BERLIN: Are you going to be
16 providing information about what that reporting
17 is going to look like in advance so we know what
18 needs to be done with -- I mean, do you
19 anticipate supplementing that proposed amendment
20 to clarify? Because that just seems a little
21 amorphous now for our purposes.

22 MS. GOULD: I think these Regulations
23 won't be effective until October, so it wouldn't
24 apply to the reporting period that's coming up in
25 July, so it wouldn't really have an effect until

1 next July and we will have more direction
2 available for the POUs before then.

3 MR. HERRERA: And if you have ideas on
4 how you can report that information in a way that
5 minimizes the amount of work POUs have to do,
6 that would be great.

7 MS. BERLIN: I think Angie raised a good
8 point about reconciling different reports that
9 are used for different purposes, and now they're
10 being turned around in some instances and used to
11 verify something that they were never intended to
12 be used for, so I think that that's a problem.
13 Maybe in the larger reporting what information
14 you already have, what information you
15 additionally need, it's a side issue that
16 overlaps quite a bit into the RPS.

17 With regard to the 1240 and the
18 enforcement provisions, we also appreciate the
19 Joint Workshop, knowing where the CEC and the Air
20 Resources Board is coming from, but I think it's
21 important, absolutely imperative that for
22 purposes of this point in time, we realize that
23 there are separate and distinct roles that there
24 may be pending legislation, but that legislation
25 is not the law right now, and we need to move

1 forward with the roles that each agency has under
2 the regulation and, in particular, extremely
3 concerned with the role the CEC is placing them
4 self into by asking in the answer to a complaint
5 for information regarding mitigating factors.
6 First of all, the answer to a complaint is for
7 noncompliance and the mitigating factors go to
8 the extent of a penalty, so it is on its face
9 inappropriate for you to have to assume your
10 guilt when you're answering, and then go forward
11 and move on to this next step, and I don't think
12 that they're appropriately part of that vision.

13 Second of all, the role of the CEC in
14 reviewing compliance is not based statutorily on
15 review of any of the mitigating factors, so with
16 or without them, the CEC has to come to the same
17 conclusion because that's what's in the statute,
18 so it's inappropriate for that to be in the CEC's
19 Regulation.

20 And then finally, if the CEC is going to
21 make a penalty recommendation, it seems like they
22 could do so based on the information that they
23 have at hand, but application of the mitigating
24 factors is still a role for the Air Resources
25 Board and not for the CEC, and the CEC is making

1 a determination of compliance which is exclusive
2 of review of those mitigating factors. So any
3 penalty recommendation would be based exclusively
4 on comparability to the CPUC's Regulations, but
5 the statute requires that when the Air Resources
6 Board makes a final determination, that's
7 comparable with that, but also consistent with
8 the authority that the Air Resources Board has.

9 So I'm really concerned here with what I
10 see as blurring of the roles of the agencies and
11 essentially cutting the Air Resources Board out
12 of their statutory authority to apply their
13 penalty metric when looking at whether or not a
14 penalty is appropriate if there is not
15 compliance. So those are all my comments for
16 now.

17 MS. GOULD: Thank you. Okay, Tim Tutt
18 with SMUD.

19 MR. TUTT: Good morning. I am Tim Tutt
20 representing the Sacramento Municipal Utility
21 District, and obviously I'm going to have some
22 comments on one of the big issues that's been
23 discussed today, the definition of bundling and
24 how that's been changed in the Regulation. I
25 think I'll probably spend more time talking about

1 that than anything else, so I wanted to get a
2 couple of other things out of the way first. And
3 the first is the provision that you've added to
4 clarify what happens with contract amendments in
5 the small group of resources, 3202(A), those
6 resources that were signed before June 1st, 2010,
7 but weren't eligible at the time, presumably. We
8 appreciate the clarification there, but two
9 things, we think you've gotten that clarification
10 a little bit wrong in that you tie the change in
11 the resource from sort of a not grandfathered,
12 but unclear status, to a categorized status, to
13 the length of the term of the original contract.

14 So for example, somebody could make a
15 change in the contract that increases generation,
16 but keeps the same term, and it wouldn't make any
17 change in the categorization. So we think you
18 should change the clarification to say something
19 like the resource or the contract is re-
20 categorized when the original terms of the
21 contract no longer apply, something like that, so
22 that somebody could say, you know, from this
23 point forward, our new contract is now
24 categorized, or our resource is categorized. If
25 they increase the generation with capacity but

1 not the term, then they would apply from that
2 point forward when that increase occurs, and so
3 on.

4 And the second point is that you say that
5 this is consistent with what you've written for
6 32(A)(O)(2)(a), the much larger set of
7 grandfathered resources, but I would point out
8 that the language is different, and the original
9 language, the original clarification of the
10 amendments doesn't provide a lot of clarity about
11 what happens in a variety of circumstances when
12 that larger set of contracts changes. So what I
13 would recommend is, again, and we can submit
14 language, consider the clarification you're
15 providing for 3202(A)(3) and make the same change
16 for 3202(A), the earlier language so that it is
17 consistent and everything is as clear as possible
18 for that.

19 The second issue I'd like to raise is the
20 3206(A), that people have talked about it as
21 excess procurement, the question of what happens
22 with amendments to contracts and how they might
23 affect the excess procurement calculation,
24 depending on the length of the amendment. We
25 understand that you probably had to clarify

1 something there, the original law just said 10-
2 year contracts, or less than 10-year contracts,
3 it didn't say anything about amendments. We
4 think that you've probably found the most
5 restrictive, from the perspective of the market,
6 way of clarifying that, I don't think that really
7 should be your mission, I don't think it is, but
8 that's where we think you've ended up. So we
9 would recommend taking another look at that and,
10 again, we'll submit language that suggests maybe
11 a different way of clarifying that, that provides
12 the clarity to the market, but doesn't
13 unnecessarily restrict cost and restrict the
14 market for procurement of these resources and
15 making amendments. As an example, you might have
16 a very good deal that says somebody says, "We
17 want to increase the term of this contract by
18 five years," it might be a 15-year contract, but
19 we can only do five years because after that
20 somebody else has our product. You'd have to
21 turn that deal down. And why would you want to
22 restrict the market that way when you already
23 have a 15-year contract?

24 Now, to the question of the bundled
25 definition, we do appreciate the movement here to

1 add a certain, I think, amount of resources to
2 the concept that this can be called bundled. As
3 you know, we've argued in the past for a much
4 more extensive move and we will continue to ask
5 that you move much more extensively to looking at
6 these resources that are interconnected within
7 our distribution systems, as effectively bundled
8 products, in much more circumstances than you've
9 suggested.

10 With respect to clarity, I don't see
11 anything in the changes you've made that says the
12 words "behind the meter." It merely says "POU
13 ownership" and "electricity consumed onsite."
14 That could be behind the meter or a resource
15 that's onsite that sells all the electricity to
16 the POU, and the POU sells it all back. That
17 could also be considered electricity consumed
18 onsite, so I think the definition is unclear as
19 far as it goes. And then I would point out that
20 ownership is not a real good factor or component
21 to base this decision on. If it's owned by a
22 POU, and it's selling all of its electricity, or
23 is contracted by all the electricity, it's not
24 net metered, and then the POU sells electricity
25 back to the customer? In our minds, that's no

1 different than if it's owned by a third party or
2 a customer and it sells by contract all of the
3 electricity to the POU, and then the POU serves
4 the customer. There's absolutely no difference
5 in the real world between those two situations in
6 our minds. So we don't understand why you made
7 the distinction based on ownership, even though
8 we appreciate the fact that you've expanded this
9 a little bit. Obviously we'd like to go a lot
10 further and I would point out that there's a big
11 difference between, as we've said before, selling
12 electricity, buying electricity from an out-of-
13 state generator, and selling it back to that
14 generator right away so that that generator then
15 sells the electricity to someone else. And under
16 the new RPS, what that kind of transaction is
17 called is a Bucket 2 transaction in many ways
18 because it's either unbundled RECs or Bucket 2,
19 but there's no Bucket 2 for instate generation,
20 you're constraining all instate generation where
21 there happens to be a generator on a customer
22 site to Bucket 3, and we've talked about how that
23 is eventually going to really sharply constrain
24 the use of Bucket 3 resources for the RPS.

25 With respect to questions of double-

1 counting or integrity of the RPS and metering
2 issues, with all due respect to my good friend
3 Steve Kelly and my new friend Rachel Gold, I
4 don't think those issues are pertinent here.
5 Nobody is talking about changing meters here,
6 your requirements still have a plus or minus two
7 percent metering requirement. Nobody is talking
8 about figuring out how to avoid double-counting
9 or whether there is double-counting here. The
10 best way to avoid double-counting is to get
11 resources tracked in WREGIS, these resources have
12 to be tracked in WREGIS, so to be part of the
13 RPS, there's not a double counting issue here.
14 To the extent that you're talking about the load
15 modifying effect of a behind the meter resource,
16 it has that additional small impact, it's not the
17 same as double-counting, it's just an additional
18 factor for behind-the-meter resources that can be
19 accommodated in the RPS by considering the
20 generation of those resources as retail load. It
21 actually does serve retail customers within
22 California. And we suggested this before, we
23 don't think that the fact of the resources are
24 behind the meter should prevent them from
25 participating in RPS, and in fact it doesn't.

1 They do participate in the RPS despite the
2 behind-the-meter load modifying aspect, they
3 already do. So we think that those issues aren't
4 pertinent here. What's really pertinent is the
5 fact that these resources are attached or
6 interconnected in our distribution systems, serve
7 the retail load of our customers, and that
8 electricity meets all the requirements as far as
9 we can see of product content Category 1
10 resources.

11 The fact that the resources are bundled
12 or unbundled in a net metering situation, we've
13 had that dispute, but if it's a situation where
14 the contractual relationship is that no matter
15 where the resource is located, all of the energy
16 is sold to the POU and the POU serves that
17 customer. We don't think it's at all similar to
18 having the electricity sold back to a generator,
19 that's not what's happening. Electricity is
20 being sold to a customer. It's serving retail
21 load. So, thank you.

22 MS. GOULD: Thank you. Tanya De Rivi,
23 SCPPA.

24 MS. DE RIVI: Good morning and thank you
25 very much to the Energy Commission and Air

1 Resources Board for holding today's workshop.
2 I'm Tanya De Rivi, the Director of Government
3 Affairs for the Southern California Public Power
4 Authority. I wanted to reiterate some of the
5 comments that have already been said by our
6 fellow publicly owned utilities and we'll also be
7 submitting written comments that go into further
8 detail on some of our priority issues for the RPS
9 Enforcement Procedures, as well as the Penalty
10 Proceeding.

11 First up on the distributed generation
12 issue, we again believe that all distributed
13 generation should be counting as a Bucket 1
14 resource. We still are perplexed on why it is
15 that California solar should be valued less than
16 out-of-state wind resources under California's
17 own Renewable Portfolio Standard. We don't think
18 that the reverse should be the State's intent.

19 At a minimum the excess energy paid for
20 by utilities from distributed generation
21 customers should be counted as a Bucket 1
22 resource, and we are encouraging the Energy
23 Commission and state policies to expand renewable
24 products to a broader market as the best and most
25 cost-effective way for California utilities to

1 meet the RPS.

2 Also wanted to broaden the discussion
3 beyond the Governor's and the State of
4 California's push for a 50 percent renewables
5 target by 2030, so also consider both SCPPA's
6 comments, the Joint Utilities' comments, which
7 PG&E was a part of, as well as the Air Resources
8 Board comments that were filed with the U.S.
9 Environmental Protection Agency that recommended
10 a modular approach for the Clean Power Plan that
11 California recommended a modular approach like an
12 RPS, for example, and that having overly
13 restrictive RPS policies in California will make
14 it extraordinarily difficult to try to sell other
15 states like sunshiny states in Arizona and
16 Nevada, for example, to participate in working
17 with California on an RPS. So we will outline
18 concerns we have with the definition of bundled
19 outlined in Section 3201, the ownership metric,
20 as has already been stated, isn't the most
21 correct and probably overly narrow restriction on
22 how that's being defined, such as if POUs use
23 Power Purchase Agreements.

24 We'll also be filing comments on the
25 Optional Compliance Measure, Section 3206. We're

1 going to recommend that staff recognize natural
2 and manmade disasters as an optional compliance
3 measure, things like earthquakes, terrorist
4 attacks, cyberattacks that may impact a publicly
5 owned utility's ability to meet requirements.
6 And under compliance reporting, we'll be
7 recommending a modification on the documentation
8 issue for PCC classification. We're also looking
9 forward to getting some more clarity as NCP and
10 MSR had already mentioned on the water pumping
11 issue, it's overly broad right now and we would
12 appreciate working with staff to help clarify
13 that further.

14 We also wanted to reiterate comments that
15 we have on ensuring that the Air Resources Board
16 under the current law remain an independent and
17 unimpeded process separately from the Energy
18 Commission as they work forward on the RPS
19 Enforcement Penalty Proceeding. We will be
20 filing our comments by the end of the month, a
21 few weeks early, and we'll be following up with
22 you all if you have any questions on that. Thank
23 you.

24 MS. GOULD: Thank you. Nancy Rader,
25 CWEA.

1 MS. RADER: Good morning, I'm Nancy Rader
2 with the California Wind Energy Association. I
3 wanted to just first briefly agree with the
4 comments that PG&E made on dynamic transfer and
5 on SB 591, and also agree with the comments made
6 by LSA and IEP on the bundled product definition,
7 and I did want to expand on the concerns with the
8 bundled product definition.

9 LSA raised the issue of double-counting
10 of behind-the-meter solar because you'd be
11 counting the reduced load that results from the
12 solar, as well as the solar production that
13 double counts. We believe there's also another
14 fundamental concern about double-counting that
15 hasn't been discussed today, and that relates to
16 what the host of the system, whether it's behind
17 the meter or not exactly, whether the host of the
18 customer sited system believes they are getting.
19 Do they think they are receiving solar energy?
20 Do they tell their friends and neighbors that
21 their home is powered by renewable energy? Do
22 they believe they are offsetting their own
23 greenhouse gasses associated with their
24 electricity use and even the use of their car? I
25 suspect that they do.

1 Even if the system is owned by the
2 utility, or if owned by the customer, if the
3 contract allocates the RECs to the installer,
4 what does the consumer believe? Has there been a
5 clear disclosure that they are not getting solar
6 energy? Are they given a choice in the matter?
7 Does California have any consumer protection
8 standards in place and, if so, does the utility
9 have to show in order to count those RECs that
10 the consumer protection rules have been followed?

11 Unless and until these kind of things are
12 addressed, we don't believe we should allow any
13 customer sited RECs to count as Bucket 1
14 renewables. Thank you.

15 MS. GOULD: And just, sorry, just a quick
16 question. So would your concerns also go toward
17 counting customer-sided DG as Bucket 3?

18 MS. RADER: Yeah, I think the customer
19 protection concerns apply there, as well,
20 actually. I hesitated a moment to say that
21 because I haven't really thought about it, but I
22 think the same would be true for Bucket 3.

23 MS. GOULD: Thank you. Abraham Alemu,
24 City of Vernon.

25 MR. ALEMU: Thank you for giving me this

1 opportunity to comment. My comment relates to a
2 request to add to the modifications concept that
3 hasn't been brought up yet. It has to do with
4 the optional compliance mechanisms. We would
5 like to request one of those modifications be to
6 include regulatory delays. That request is to
7 fault. The first thing is, when SBX12 became
8 law, POU's were required, the governing bodies
9 were require to come up with enforcement and
10 compliance plans. The City did that and that was
11 just a little bit sooner, I mean, ahead of the
12 CEC regulation, so we went ahead and adopted the
13 compliance plan and the enforcement plan. In
14 that compliance plan, one of the provisions is
15 regulatory delays were considered to be part of
16 the mechanism as the option compliance plans.
17 But when the CEC regulations were adopted, that
18 concept, that provision is missing. The staff
19 tried to implement these two regulations that
20 were in the rules, one by the City Council, two,
21 by CEC, it creates a problem to us, which rule,
22 which decision do we go by? Do we go by the
23 Council approved mechanism, I mean, plan? Or do
24 we go by what the CEC adopted lately? That's a
25 huge problem. So for that reason, you know, for

1 the sake of consistency, for the sake of
2 alignment, we ask the mechanism be included as
3 part of the optional compliance mechanism. The
4 reason why that's important to the City of
5 Vernon, as every one of you know, in the middle
6 of the RPS implementation process, the CEC
7 suspended the applicability of the rule to out of
8 state biomethane as it relates to biomethane.
9 That process, that moratorium, took roughly 16
10 months to be back, you know, to be active. So
11 during that time period the contractors, the
12 counterparts we had to deliver biomethane were
13 not able to provide, to deliver the biomethane in
14 time and that affected the City's ability to
15 comply, you know, for comply fully with the
16 compliance period 1. They were not sure if their
17 biomethane would be counted back at 1 or, you
18 know, back at 3, or nothing at all.

19 And the second factor was, there were
20 some projects that were actually in the queue to
21 be developed, but that 16-month process pretty
22 much killed the financing option for those
23 projects, so not only we got a lower volume of
24 delivery when the suspension was lifted, we lost
25 resources that would have delivered biomethane at

1 our existing contract.

2 So what I'm saying is, you know, the
3 issue is important to us, to Vernon, it meant it
4 omitted the compliance period 1, RPS requirement
5 or not, and above that, you know, the City
6 Council looked at statute SBX12 and believed it
7 was within our authority to include those
8 compliance provisions. And for the staff now to
9 try to implement the decision, we are at a loss,
10 basically, you know, do we go by the CEC adopted
11 Regulation? Or by the Council Decision plan? So
12 for that reason we seek, you know, the
13 modification inclusion of a regulatory delay as
14 an optional compromise mechanism. Tanya brought
15 a number of issues which we like, we concur with,
16 one of them being the counting of behind the
17 meter DG for compliance purposes. Just, you
18 know, like any utility, we're being faced with
19 questions of do we actively promote, you know,
20 behind the meter solar, or not? If the value the
21 entire customer basically is going to get is PCC
22 3, so that's been a real invest or not to invest
23 issue for us, can we use public funds? You know,
24 if it doesn't have that value? So we agree with
25 the comments submitted by Tanya SCPA. I plan to

1 work with Tanya, you know, and include my
2 comments when the SCPPA comments are provided
3 later on. Thank you.

4 MS. GOULD: Thank you. David Kolk, City
5 of Colton.

6 MR. KOLK: Good afternoon, or morning, I
7 guess. I appreciate the opportunity to be here.
8 I'm David Kolk from the City of Colton. Colton
9 is a disadvantaged community in the San
10 Bernardino area, it is dedicated to
11 sustainability, both water, electric, and all
12 aspects of sustainability. Colton faced an
13 interesting issue. In 2005, our peak demand was
14 95 megawatts. Today, our peak demand is 84
15 megawatts. We've never recovered from the 2009-
16 2010 economic downturn. But in 2007, Colton had
17 already acquired resources to meet 120 megawatts
18 of load. So Colton was in a position where any
19 renewable purchase, or any type of purchase, just
20 added to its surplus generation. That process
21 will change in 2018 as a result of some of the
22 environmental rules that have been going on in
23 2017, Colton's largest energy resource, the San
24 Juan Generating Facility in New Mexico, shut
25 down. This will take out San Juan 3 and

1 approximately two-thirds of our energy. In
2 anticipation of this, Colton has already been
3 acquiring resources to come on line beginning in
4 2016 and 2017, even though it has to be shut
5 down, San Juan 3, by the end of 2017. We don't
6 know when it's going to shut down, nobody really
7 anticipates that this unit will live until the
8 end of the time period. And if you've seen the
9 operation statistics of it, you know we would all
10 prefer it would be shut down and burned today.
11 When you have a coal plant that's operating less
12 than a wind fire capacity factor, we have
13 problems with it.

14 But Colton is sitting there and has
15 already began acquiring the resources, and by
16 2017 we will be in compliance with the 33 percent
17 and probably the 50 percent with the resources
18 that we already have contracted for and are in
19 advanced negotiations with. So by January 21,
20 2018, we will be in compliance with potentially
21 the 2013 regulations in terms of renewable
22 procurement. Coming into compliance is already
23 costing us significant amounts of dollars. We
24 are not in compliance with the 20 percent in
25 compliance period one. We will probably be in

1 compliance in compliance period two, at the
2 expense of several millions of dollars for
3 energy, even short term energy that we simply do
4 not need. We did enter 2011 in kind of a strange
5 situation competitively, our retail rates were
6 significantly higher than those in the
7 surrounding communities primarily served by
8 Edison. Since then the situation has changed
9 because we've been able to terminate or
10 renegotiate various contracts, so now our rates
11 are at or below the surrounding communities, but
12 we're still spending millions of dollars, but the
13 big hit is going to be 2017 when we bring on a
14 landfill gas generator that, assuming San Juan
15 were there, we don't need, but we're bringing it
16 in early. We don't know when San Juan 3 is going
17 away, so you're in a situation of, do we not do
18 anything until San Juan is scheduled to go down?
19 Or do we start procuring resources early? But as
20 we procure the resources, we're procuring
21 renewable resources that are more expensive than
22 alternative thermal resources in the marketplace,
23 so we're taking a financial hit.

24 The regulations dealing with procurement
25 expenditure limits are unclear. And I would

1 think in my discussions with staff,
2 underappreciated. There doesn't seem to be any
3 discussion where any appreciation on the part of
4 CEC staff that the procurement expenditure limits
5 truly exist and were meant to deal with
6 situations we face, among others, that if you
7 don't need resources and any renewable that you
8 purchase is surplus to your retail load, why
9 should we be out there acquiring the resources
10 until we have a retail requirement? The
11 Regulations, at least in my view and staff's
12 view, is that the Regulations do not deal with
13 this situation and is not appreciated by the
14 Energy Commission staff, or the drafters of the
15 legislation that not all utilities require
16 resources in a specific time period, particularly
17 those entities that are still dealing with the
18 fallout from the 2009-2010 economic downturn in
19 this country.

20 So as we're going through this, I ask
21 that you consider the unique circumstances of
22 each utility and where they're going to be, okay,
23 it's not that we're in a situation where we're
24 opposing or delaying, it's a situation where
25 we're attempting to minimize the financial impact

1 on a community, but be in full procurement when
2 we have a retail energy requirement that has to
3 be met through additional purchases. So if there
4 are no questions, I appreciate the opportunity to
5 speak to you.

6 MS. GOULD: Thank you. And the last
7 card, Bill Westerfield from SMUD.

8 MR. WESTERFIELD: Good morning, Bill
9 Westerfield with SMUD. I'd like to also thank
10 you both for holding this joint workshop and
11 really value the conversation that we hope to
12 have on these Regulations going forward.

13 First of all, I'd like to briefly address
14 some remarks that my esteemed colleague, Mr. Tutt
15 made earlier on the excess procurement issue. I
16 think there was a question that, Gabe, you had
17 about what commercial situation might a POU have
18 to extend a long term contract. And certainly
19 we're not always able to go out there and get
20 long term contracts for the period that we want
21 them.

22 But it also concerns me a bit that it
23 seems the proposed regulation assumes that an
24 amendment or modification to a contract is a
25 brand new contract that should be considered just

1 for the period of time for that amendment or that
2 modification. And really, when you have long
3 term contracts and you have the opportunity to
4 maybe extend them for several years, it's an
5 extension of an existing contract, not a brand
6 new contract. And I think California law would
7 substantiate that.

8 So I'd like to address most of my remarks
9 to the Section 1240 RPS enforcement provisions.
10 Current law sets forth a clear and limited role
11 for the Energy Commission in enforcement of the
12 RPS on POU's, and I'll quote: "The Energy
13 Commission may issue a Notice of Violation and
14 correction against a POU for failure to comply
15 with this Article, and the CEC may then refer
16 violations to the ARB for penalties. The CEC
17 takes a decidedly expansive view of its authority
18 by proposing to grant itself the power to
19 recommend penalties to the ARB and make findings
20 regarding mitigating and aggravating factors
21 relating to penalties. Consequently, the
22 proposed regulations include an invitation to the
23 POU's when answering an enforcement complaint to
24 include information pertinent to monetary
25 penalties such as history of past violations, the

1 extent to which the violation will cause harm,
2 that sort of thing. And the CEC justifies
3 collection of this information because it *may*
4 recommend such penalties to the ARB. And it
5 solicits this information even though it has no
6 penalty authority, and nor is there a suggestion
7 in the statute that it does."

8 But the CEC takes this a step further.
9 The ISOR states: "The Energy Commission's final
10 decision will include all findings of fact,
11 including any findings regarding any mitigating
12 and aggravating factors upon which the ARB will
13 rely." And further it claims the ARB will not
14 re-adjudicate the CEC's decisions and findings of
15 fact upon which the ARB's penalties may be
16 based."

17 So I'd like to say straight up that
18 making penalty recommendations and asserting ARB
19 intends to accept the CEC's recommendations and
20 findings of fact clearly overstates the CEC's
21 authority under the statute. The statute says
22 that penalties are the province of ARB and not
23 the Energy Commission. And it's explicit on this
24 point.

25 The role that was given to ARB for

1 whatever reason and the CEC cannot -- this role
2 of penalties was given to the ARB and the CEC
3 cannot rewrite the law because it believes it's
4 prudent to administer it otherwise.

5 The enforcement scheme in 339.930 was
6 enacted in SBX 2 or 12, whatever we're supposed
7 to call it. The statutory scheme clearly divides
8 enforcement task between the finding of
9 noncompliance on the one hand, and the assessment
10 of a penalty on the other. The division of
11 responsibility was a legislative compromise that
12 originated in SB 14, if I'm not mistaken, many
13 years ago, but it was a compromise that the
14 Legislature made and not one that the CEC can
15 revise on its own. This was important to POUs at
16 the time when SB 14 was considered, and we
17 continue to view that as important today.

18 And any assertion that CEC's
19 recommendations are only advisory is underscored
20 by language in the ISOR that ARB does not intend
21 to re-adjudicate CEC's findings on its
22 recommendations. The CEC is clearly attempting
23 by this regulation to heavily influence ARB's
24 decision making, if not appropriate that decision
25 to itself.

1 If these Regulations are enacted, I
2 expect great deference by the ARB to the penalty
3 recommendations of the CEC. This division of
4 responsibility is unique and SMUD can understand
5 the challenge faced by the agencies in
6 administering it, SMUD is sympathetic to the
7 tough job that the agencies have with this
8 compromise, this legislative compromise. This
9 division requires some vision in how to create a
10 fair process that is true to the legislative
11 compromise; however, this is not the way.

12 If the CEC finds the statute unworkable,
13 then it should go back to the Legislature for a
14 solution. We strongly believe that the proposed
15 regulation misreads the statute and violates the
16 legislative compromise. And we urge the CEC to
17 reconsider these proposed rules and limit its
18 role to a finding of noncompliance as written in
19 the law.

20 MS. GOULD: Thank you, Bill.

21 MR. WESTERFIELD: Thanks very much.

22 MS. GOULD: Okay, unless there are any
23 additional comments in the room -- oh, yes, Tim.

24 MR. TUTT: I just wanted to speak a
25 little bit more about the bundling issue and the

1 double-counting question, and consumer protection
2 questions that have been raised today.

3 AS I've said, SMUD submitted comments in
4 a couple proceedings with the CEC that they
5 should consider this additional benefit that
6 behind-the-meter solar gets in the sense of
7 reducing our retail load and hence our RPS
8 obligation. I've got to make sure we understand,
9 it's not double in the sense of it's counted
10 twice, right? And for a large resource that
11 sells renewable energy to us, 100 percent of that
12 generation counts towards the RPS. For a behind-
13 the-meter resource, it's not part of the RPS for
14 a variety of reasons, it's hard to get them
15 included. It reduces our RPS obligation by
16 currently 20-25 percent of the generation of that
17 facility. By 2020 it will be 33 percent of the
18 generation of that facility, not 100 percent. A
19 large portion of renewable generation within
20 California just will not be counted, that's the
21 way that works. If you want to make sure that
22 that distributed generation doesn't get that
23 extra benefit, then add the generation into the
24 retail load calculation, it's serving retail load
25 in California.

1 With respect to consumer protection
2 issues, I guess I come from the perspective of
3 working for a publicly owned utility owned by our
4 customers, we understand and want to protect our
5 customers. There are some pretty funky solar
6 companies out there that tell our customers
7 stories, aren't always exactly right. That's the
8 kind of consumer protection we're interested in.
9 We understand the issue about claiming RECs one
10 way or another, and we've run into, for example,
11 at the CEC double-claim of large scale wind RECs
12 between Edison and SMUD, you guys have handled
13 that. The idea that two different entities or
14 companies are making commercial benefit off of
15 the same kilowatt hour of generation is what
16 we're worried about there. We've run into that
17 issue similarly with our green pricing program.
18 We've purchased renewable energy credits, later
19 we've had the third party provider replaced
20 because the companies from those credits were
21 claiming them somewhere else. Those were
22 replaced. We understand that.

23 We have given our customers the choice of
24 either providing us the RECs when we give them an
25 SB1 incentive, or not. Some of our commercial

1 customers have said, no, we want to keep the
2 RECs, and it's presumably because they have a
3 commercial purpose for that. The commercial
4 purpose would be that they want to claim that
5 solar generation as part of the cache for their
6 company or their product. And Federal Trade
7 Commission governs the fact that they can claim
8 that or not based on whether they own the RECs.
9 I submit that this does not apply, it's not
10 consumer protection, for having us or you guys or
11 anybody else -- again, with due respect to my
12 friend, Nancy Radar -- to go out to residential
13 customers and tell them, "You cannot get the
14 value of the solar on your house by selling the
15 RECs to the utility, or if you do, you can no
16 longer say anything about the solar on your
17 house." You can't tell your neighbors that you
18 have solar on your house, you can't point it out
19 to them, that's not a commercial claim, and it's
20 not consumer protection to go out and prevent
21 them from talking about the solar on their house.
22 Thank you.

23 MS. GOULD: Thank you. Okay, anymore
24 comments in the room? Okay, Kevin, are there any
25 WebEx comments? Okay. So Kevin, would you mind

1 unmuting all the lines so we can see if there are
2 any comments on the phone? Okay, it sounds like
3 they're open.

4 MS. JOHNSON: This is Linda Johnson. I'd
5 like to make some comments.

6 MS. GOULD: Yes, thank you, Linda. Go
7 ahead.

8 MS. JOHNSON: Hi. Good morning, I'm from
9 Braun, Blaising, McLaughlin and Smith. And we
10 represent a group of small publicly owned
11 utilities, including the Cities of Cerritos,
12 Moreno Valley, Corona, Colton, Victorville,
13 Pittsburgh, and Rancho Cucamonga. Thank you for
14 the opportunity to comment today.

15 We submitted written comments on behalf
16 of the small POU Coalition on July 28, 2014,
17 asking the Commission to adopt flexible rules for
18 categorization of power from distributed
19 generation as Content Category 1 to reflect the
20 value of distributed generation to the state's
21 utility grid and to further encourage utilities
22 to make it a priority in their resource mix. Our
23 position has not changed. We do appreciate what
24 you're trying to do with the City on distributed
25 generation in this modification to the rules, but

1 we would also, however, add that if the POU buys
2 bundled RECs from a third party PV system located
3 on a commercial facility, and provides electric
4 service to the commercial facility under a
5 separate meter, the POU's power purchase should
6 be treated like any other wholesale transaction
7 and count as Content Category 1.

8 We would urge the Commission and the
9 staff to make the changes in the regulation to
10 clarify that this type of transaction would
11 qualify. And like SMUD, we've also dealt with
12 the consumer protection issues; as you're aware,
13 there's a pretty comprehensive treatment of green
14 washing in the state and at the Federal level and
15 we deal with that in contract negotiations with
16 customers, and some of them do want to keep the
17 right to claim and use their renewable generation
18 that's on their facility for all kinds of
19 reasons. And you have to be really careful about
20 dealing with how to use it for Regulatory
21 compliance and also whether or not a customer can
22 use it for marketing purposes, or whatever, in
23 the contract, and sometimes it just doesn't work.
24 And so I think that's dealt with in other forums
25 and regulatory authorities, and so I don't think

1 that should be an issue for consideration in this
2 particular proceeding. It's clear that both the
3 customers and the utilities are very aware of the
4 issues there. Thank you for allowing me to
5 comment today and I appreciate the opportunity to
6 work with you.

7 MS. GOULD: Thank you, Linda.

8 MS. WISLAND: Hi. This is Laura Wisland
9 with UCS, I'd like to make some comments.

10 MS. GOULD: Go ahead, Laura.

11 MS. WISLAND: Thanks. My name is Laura
12 Wisland. I'm an Energy Analyst with the Union of
13 Concerned Scientists, and I'm sorry I can't be
14 there in person, but I really just want to first
15 of all thank the Energy Commission staff for your
16 hard work on this rule and I plan to follow-up
17 with some written comments. And before I get
18 into my specific comments on the rule, just
19 because we've gone way down into the weeds,
20 appropriately in this workshop, I think it's
21 important to say a couple of things about why the
22 State is making these investments in clean
23 renewable generation resources.

24 When we talk about the RPS today, it
25 seems like it's all about carbon reduction and,

1 in fact, that's a huge part of it, and burning
2 fossil fuels, our climate have also incalculable
3 impacts on our state's economy and public health,
4 I think we're seeing that loud and clear right
5 now with the drought that we're currently in.
6 Transitioning away from the fossil fuel resources
7 is making a very important step forward to
8 reducing our reliance on these sources of
9 generation and California is certainly not alone
10 in this program, there's 29 other states that
11 have an RPS Program. But also I think that
12 people forget that the RPS was originally passed
13 to make sure that we don't experience rate shocks
14 from being overly reliant on one source of
15 generation. If we're overly dependent on a
16 resource like hydro power, which as we know is
17 becoming less and less reliable, or natural gas
18 which has been historically very volatile in
19 terms of its prices, our customers are in trouble
20 because we're much more exposed to potential rate
21 shocks.

22 So let me talk about a couple quick
23 things. I want to just make some quick comments
24 about the bundle definition. In the past, UCS
25 has been very concerned about the CEC and the PUC

1 developing rules that would treat the exact same
2 resources differently for the purposes of RPS
3 compliance, and generally we still believe that
4 should be the case, that the rule should be
5 equal, provide equitable costs and benefits
6 amongst all the electricity ratepayers in the
7 State. However, I do think that the current
8 changes to the bundle definition which would
9 allow POU-owned behind-the-meter facilities to
10 count towards Bucket 1 could be an important tool
11 to provide some of the POUs, especially the ones
12 that are, you know, smaller and don't have the
13 ability to sign long term contracts for large
14 generation facilities, would be able to provide
15 them with some valuable flexibility in that
16 program. However, I am concerned like a lot of
17 other commenters today that we do need to be
18 making sure that the megawatt hours that were
19 generated and are associated with those RECs that
20 now would be counted as Bucket 1 are added back
21 to the retail sales calculations so there's no
22 misunderstanding and there's no perception that
23 these RECs are somehow being treated with extra
24 compliance value than they have.

25 And then the other thing I just wanted to

1 quickly bring up were some of the issues that the
2 various employees and customers of the Merced
3 Irrigation District brought up today. First of
4 all, the proposed regulations, I believe, do
5 provide MID with very valuable compliance relief
6 by ensuring that MID is not going to have to
7 purchase renewables to satisfy its load that it
8 would otherwise be able to be satisfied with a
9 low cost hydro power generation from the
10 facilities that they've regained ownership of.
11 However, I strongly believe that there is nothing
12 in the statute at all that would allow the Energy
13 Commission to allow MID to avoid its obligation
14 to follow the Bucket requirements in the RPS
15 Program for the renewables that they may be
16 obligated to purchase. There's no doubt that
17 Merced and other counties in the state are facing
18 significant economic hardships, and luckily
19 Merced has benefited from lower electricity rates
20 when compared to its investor-owned utility
21 neighbors, but it seemed like today folks were
22 making the case that requiring MID to abide by
23 the same rules as every other electricity
24 provider in the state by purchasing bundled
25 renewable energy products from clean generation,

1 it's going to somehow cause electricity rates to
2 skyrocket and that this could simply be avoided
3 by purchasing unbundled RECs. You know, one of
4 the provisions in the RPS program that requires
5 electricity providers to prioritize transactions
6 that are bundled, it's in there to protect
7 California jobs and California ratepayers, and
8 that when you buy an unbundled REC, as everybody
9 knows, it can come from anywhere in the Western
10 Interconnect. And that electricity provider
11 would still need to procure electricity to meet
12 load, and I think that sometimes we forget that
13 extra cost when we discuss the relative value of
14 unbundled RECs.

15 Also, as we all know, the cost of solar
16 PV has experienced historic and unprecedented
17 cost declines over the past seven years to the
18 point where today the price of solar electricity
19 is comparable in many cases to the cost of grid
20 electricity. And these ratepayer benefits are
21 augmented by the fact that Bucket 1 transactions
22 provide stable electricity prices, which is an
23 important attribute that I mentioned earlier. So
24 I think that combined with the fact that CEC
25 rules would potentially allow Merced to make

1 investments in its own district and onsite solar
2 PV generation, and have that count as Bucket 1
3 would be able to give the Irrigation District
4 adequate flexibility and appropriately address
5 the unique circumstances of the utilities.
6 Thanks and I look forward to working with
7 everybody to finalize these rules.

8 MS. GOULD: Thank you, Laura.

9 MR. MILLS: Can you hear me?

10 MS. GOULD: Yes.

11 MR. MILLS: I'd like to make a comment.

12 MS. GOULD: Okay, go ahead.

13 MR. MILLS: Okay, good, I wanted to make
14 sure you could hear me, I've been pushing this
15 raise hand button and I'm not sure if it had an
16 effect. I guess not. In any case, thank you for
17 fostering a great discussion today regarding the
18 RPS. Again, my name is Steve Mills. I'm with
19 the Alliance for Desert Preservation. And we,
20 along with an informal coalition made up of
21 mutual benefit corporations, community groups,
22 community associations, and businesses and
23 residents of the high desert area of San
24 Bernardino County, submitted a comment letter,
25 actually it was submitted on April 3, the bottom

1 line I'll get to right away is that we absolutely
2 do agree with the concept that behind-the-meter
3 DG should be classified as broadly as possible in
4 terms of PCC 1, and I guess to use the parlance
5 employed today by many speakers, Bucket 1.

6 We also support a letter that was
7 submitted July 28, 2014 by the Alliance for Solar
8 Choice, which boiled down to its essence said
9 much the same thing. We agree with a lot of the
10 speakers today in terms of the benefits of
11 classifying RECs from customer side DG as PCC 1.
12 It would have the benefit of giving compliance
13 entities an additional compliance tool. The use
14 of RECs from DG as Bucket 1 would also assist in
15 meeting California's current and future RPS
16 goals, and it would harmonize the RPS program
17 with the state's interest in creating a
18 sustainable market for distributed generation
19 which is being facilitated by a number of State
20 policies, including AB 32, GHG Reduction Goals,
21 California Solar Initiative, the New Solar Homes
22 Partnership, the Governor's 12,000 megawatt DG
23 target and, of course, achievement of Zero Net
24 Energy Goals.

25 And from a public policy standpoint, DG

1 Systems deployed on the customer side of the
2 meter certainly do fulfill all of the objectives
3 of the RPS, that is the objectives that the RPS
4 was intended to achieve. I don't think anybody
5 here would disagree with a proposition that a
6 megawatt generated by a DG system has just as
7 much energy and green value as a megawatt
8 generated by utility-scale renewable energy
9 facilities in terms of fulfilling the goals of
10 the RPS and all the other state mandates that I
11 mentioned earlier. I do think it's unfortunate
12 that reading the various relevant PUC decisions,
13 there is an artificial distinction made in
14 interpreting the RPS statute, which is 399.16 in
15 order to treat customer-side DG as a PCC 1 or
16 Bucket 3, we don't see any persuasive
17 justification for that, and in the letter that we
18 wrote, we did reference those Decisions and say
19 why we disagree with that statutory
20 interpretation, I won't take the time to do that
21 on everybody's dime here today, but the short
22 answer is that we urge the CEC to determine as
23 broadly as possible in all circumstances
24 involving DG generation, including where the
25 energy is used for onsite consumption, that the

1 associated RECs be deemed PCC 1, otherwise we
2 will stymie the ability of the stakeholders to
3 harness customer interest in DG resources to meet
4 the state climate change goals, and that would be
5 contrary to the clearly articulated State
6 policies that are seeking to support customer
7 side DG. Thank you.

8 MS. GOULD: Thank you, Steve. Does
9 anyone else on the phone have comments? Okay.
10 Hearing none, I think we'll close the workshop
11 for today. Thank you all so much for joining us
12 and for providing such a good comprehensive
13 conversation, thank you.

14 (Whereupon, at 11:43 a.m., the workshop was
15 adjourned)

REPORTER'S CERTIFICATE

I do hereby certify that the testimony in the foregoing hearing was taken at the time and place therein stated; that the testimony of said witnesses were reported by me, a certified electronic court reporter and a disinterested person, and was under my supervision thereafter transcribed into typewriting.

And I further certify that I am not of counsel or attorney for either or any of the parties to said hearing nor in any way interested in the outcome of the cause named in said caption.

IN WITNESS WHEREOF, I have hereunto set my hand this 29th day of April, 2015.

A handwritten signature in cursive script, appearing to read "Kent Odell", is written over a horizontal line.
